

Computer Engineering

Three of the premier Computer Architecture conferences are the ACM/IEEE International Symposium on Computer Architecture (ISCA), the IEEE/ACM Symposium on Microarchitecture (Micro), and the ACM Conference on Architectural Support for Programming Languages and Operating Systems (ASPLOS).

1. Look at the ISCA, Micro and ASPLOS conference web sites. Choose one of the technical papers you're interested in. Write a 2-page description of the research, and what you think you might like to work on.

The ISCA 2017 web site is <http://isca17.ece.utoronto.ca/doku.php>.

The Micro 2017 conference happens later this month, so use the 2016 conference:

<https://www.microarch.org/micro49/>.

ASPLOS 2017 can be found at: <http://novel.ict.ac.cn/ASPLOS2017/>.

2. On a separate page, identify events besides the technical sessions you would have liked to attend.

Create a pdf document for your work, and hand in your assignment by typing on a CADE machine:
